

Battery conversions

Make the switch

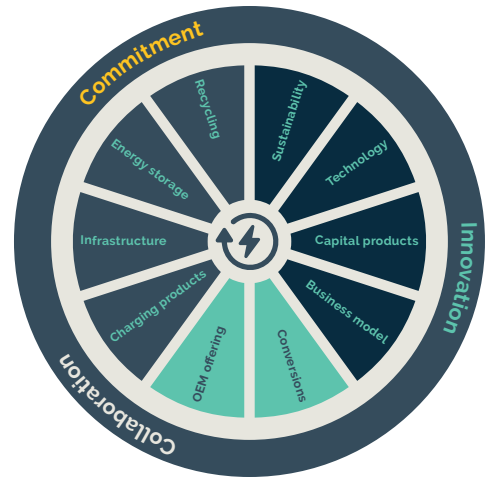

Switch the
power when
you are ready
– from diesel
to electric on
your terms

Make the switch – when you are ready

We want to boost productivity, enhance safety and cut emissions – all while lowering your total cost of operation.

Battery conversions are a major cornerstone in the journey towards electric underground mines. We can help you speed up the switch from diesel powered equipment to battery electric vehicles. Conversions are cost efficient and utilize the full potential of low Total Cost of Ownership (TCO). We offer short turnaround times and flexible payment terms – in parallel with high performance.

The conversion is included in a midlife rebuild, returning your equipment to maximum productivity and operating efficiency – including an addition of thousands of new hours with low emissions. Partner with us in the transformation towards the mine of the future, our electrification solutions also include Batteries as a Service (BaaS) and charging products.
